Reviewer 1:

Typos are fixed. I went back and found and included a reference for the NCAR CDC 6600 's memory and speed. Thank you for questioning that.

Reviewer 2:

The Title – I changed the title to the reviewer's first suggestion. I agree that it is better than my original title.

I made corrections and additions like Zipser reference when Line Islands Experiment was first mentioned.

The reviewer is correct to point out that Ramage, 1970 and AMS/WMO, 1970 are the same reference. I kept the AMS/WMO reference and took out the Ramage reference because I use the former as the photo credit of Fig. 3.   Although it isn't stated explicitly I think that Professor Ramage was the Editor of the Proceedings.

INADDITION I added a sentence and a reference to a correspondence that I had with Jim Holton in September 1971 in Section 4.2
